Tiger Queen

WHITEPAPER

Billy Bob | Tiger Queen Basic Whitepaper | 07/01/2022

About

Tiger Queen is a Binance Smart Chain coin. The basic idea behind the project is to achieve the following;
- To create a sustainable token and community on BSC
- Involve the community in almost all decisions for the direction of the coin. This will involve voting through our community and social channels

- To eventually create an ecosystem for our loyal members, creating future launches in combination with our diamond hand holders – providing better gains, and returns for those who are loyal.
- NFT's, P2E, staking, farming – it's all in the hands of the community.
- Reward our holders with BUSD reflectoins

The Team

The team is based in Australia. We are a powerful community of like-minded individuals who – most likely like you – have been rugged, dumped on, and scammed many times. There is almost no security or trust left in the BSC community. We want to change this.
Our contract is honey-pot free, scam and rug proof, and bot proof.

Tokenomics

The tokenomics are designed to benefit the liquidity and therefore the stability of the token. Large reflection coins have an inherent problem – every buy and sells dumps the chart. We've all seen this happen. When buying action slows, the chart will dump.

Our token and contract are designed to prevent this. The basic tokenomics are listed below.

Buy: 18% Total

- 3% to Liquidity – this will provide more liquidity and thus a more solid floor and less rapid price fluctuation

- 5% Self reflections! JUST FOR HOLDING! Passive income is the best income!

- 10% Marketing – This speaks for itself. Marketing is inherent to any project. This will be one of our main focuses moving ahead.

Sell: 18% Total
